

Cytoscape

7th Annual Cytoscape Retreat and Symposium July 18-20, 2010

North Campus Research Complex, University of Michigan,
Ann Arbor, MI

About the Meeting

Cytoscape is an open source bioinformatics software platform for visualizing molecular interaction networks and integrating these interactions with gene expression profiles and other data (<http://Cytoscape.org>). The Retreat will focus on Cytoscape module development and application to biological visualization challenges. Attendees will participate in user or developer tutorials, and see demonstrations of existing Cytoscape features. A full day symposium (July 19th) will focus on “Networks in Disease and Health” with presentations by **Dr. Leroy Hood, Dr. Stephen Friend, Dr. Marc Vidal, Dr. Charlie Boone, Dr. Mark Newman** and others.

Agenda

- Sunday July 18th: Tutorials and Cytoscape Plugin Demonstrations
- Monday July 19th: “Networks in Disease and Health” Symposium
- Tuesday July 20th: Cytoscape Developers Workshop

Who Should Attend

- Biomedical and health informatics researchers, computational biologists, statistical geneticists, molecular biologists, and physician-scientists with interests in human disease.
- Computer scientists and developers working on biology related projects
